

# 1275 ALMAPLEX® INDUSTRIAL LUBRICANT

CADILLAC OVERALL SUPPLY, Detroit, MI

WX Washers; Norman Dryers; Unipress Presses • SIC 7218 Industrial Launderers

**SAVINGS OF OVER \$10,000 IN BEARINGS AND \$6,000 IN LABOR!**

**CUSTOMER TESTIMONIAL**

## **CUSTOMER PROFILE**

Cadillac Overall Supply is an industrial laundry that serves the Detroit area. They have been in business since 1953.

## **APPLICATION**

The following equipment is used in this laundry operation: WX washers; Norman dryers and Unipress presses. The WX washers are powered by 50 hp electric motors, and the Norman dryers are equipped with 30 hp electric motors.

## **AREA OF INTEREST**

While using a commercial grade grease, Don Gordon, Chief Engineer found that the grease would not stay in the bearings. As the temperature of the machine would rise, the grease would run out of the bearings.

## **LE SOLUTION**

In June of 1989 LE Representative Dave Barta recommended LE's 1275 ALMAPLEX Industrial Lubricant for this application. LE's 1275 is an excellent general purpose EP lubricant for industrial or fleet use. It contains ALMASOL, LE's exclusive wear-reducing additive. It is very effective in severe operations caused by moisture and high temperatures. LE's 1275 seals out dirt and water and prevents corrosive wear. It is excellent for electric motors.

## **CUSTOMER COST SAVINGS**

Cadillac Overall Supply estimates that since they began using LE's 1275 ALMAPLEX Industrial Lubricant, they have saved over \$10,000 in bearings and \$6,000 in labor. Lubricant consumption has also been cut dramatically. With the commercial grade grease they had to relubricate every week. After switching to LE's 1275, they only had to relubricate once a month.

We want to thank Don Gordon, Chief Engineer and LE Representative Dave Barta (pictured) for providing the information to prepare this report.

Based on actual user experience. Individual results may vary. Product used not intended to supersede manufacturer's specifications.
