

2100 NUTRIGENT INDUSTRIAL CLEANER
ALTA SIERRA GOLF & COUNTRY CLUB, California
Cleaning Golf Carts • SIC 7992 Public Golf Courses

CUSTOMER PROFILE

The Alta Sierra Golf & Country Club is located in the foothills of the California Sierras. They have been an LE customer since 1991.

APPLICATION

Cleaning the golf carts.

AREA OF CONCERN

Colloidal clay is part of the makeup of the foothills, and this "red dirt" adheres to everything. It is very difficult to remove, and acts like a red dye, especially if it has been on a surface for any length of time. The maintenance personnel were steam cleaning the golf carts with a name brand cleaner, but they had little success.

LE SOLUTION

LE's 2100 NUTRIGENT Industrial Cleaner. Maintenance personnel were

amazed at the results, especially in taking the colloidal clay dust out of the simulated leather seats on the golf carts.

CUSTOMER COST SAVINGS

LE's 2100 is now being used as a general cleaning agent for shower floors, windows, golf carts, golf clubs, etc.

OTHER PRODUCTS USED

Alta Sierra Golf & Country Club also uses LE's 9102 SYNTEMP[®] Synthetic Lubricant (aerosol) for their equipment chains, as it will stay in place and not wash off.

We wish to thank Dennis Fruzza, Assistant Superintendent; Jerry Wells, Jr., Head Maintenance Mechanic; Sean O'Brian, Greens Superintendent and local LE Representative Terry Lowell (pictured) for the information provided to prepare this report.

Based on actual user experience. Individual results may vary. Product used not intended to supersede manufacturer's specifications.
